## Caps colour change

Dear Valuable Customers,

We would like to inform about **temporary cap colour change for the Myt-5D VET (Cat. No MYT503-VET) control blood high level**. The change is caused by delays in the delivery of packaging.

For the product mentioned above, it is possible that the **caps will be black** and not red as before.

Product with a changed cap color may be available for sale from mid-May. **To avoid mistake, we recommend to identify the product based on the information provided on the label, not the colour of the cap.**

The above changes do not affect the determination method, functionality and stability of the control blood.

For any further information, please contact our Area Sales Manager.

Your sincerely,

Quality Assurance Coordinator
